VELA Executive Intelligence Dashboard

Dashboard Reference Guide.
Terms, definitions, and how to read every panel.

Your judgment. Our infrastructure.

Version 2.0 · March 2026

01 What Is the VELA Dashboard

The VELA Executive Intelligence Dashboard is a live, private command interface that surfaces everything Hannah knows about your world — deals, relationships, priorities, signals, and open decisions — in a single screen. It runs on your Mac Mini and is accessible from any device on your Tailscale network.

The data is yours, stored locally in hannah.db (SQLite), and never leaves your hardware. Every time Hannah takes an action — logging a signal, updating a deal, recording a relationship touch — it writes to the database. The dashboard reflects it on the next 60-second auto-refresh.

Item	Value
Database location	~/.openclaw/hannah.db (SQLite — 5 tables)
Dashboard URL	http://[your-tailscale-ip]:8001/dashboard/dashboard.html
Your current URL	http://100.89.207.104:8001/dashboard/dashboard.html
Auto-refresh	Every 60 seconds — or click Refresh in top right to force update
Data stays	On your Mac Mini — never leaves your hardware

> How to use this dashboard: open it first thing in the morning and glance at it throughout the day. It is not a task manager — it is a situational awareness tool. Think of it as the instrument panel in a cockpit. You glance at it and immediately know whether everything is nominal or whether something needs your attention.

What to Look For

- Any NOW badge in Priority Stack sitting without a next action
- Any deal in the Deal Pipeline with 7+ days since last movement (yellow) or 14+ days (red)
- Any relationship in Relationship Radar with 10+ days since contact (yellow) or 21+ days (red)
- Any new signals in the Signal Feed you were not expecting
- Any open decision in the footer with a revisit date that has passed

02 Panel 1 — Priority Stack

What matters most right now, ranked and color-coded by urgency and momentum. Shows your current operational priorities in ranked order (1 = most important). Each item includes the objective, the immediate next action, and two badges.

Urgency Badges

Badge	Meaning
NOW	Requires attention today. Delay has consequences. Your most time-sensitive work.
SOON	Important within the next few days. Not on fire, but needs to move this week.
NORMAL	Active priority with no immediate deadline pressure. Keep it progressing.
SOMEDAY	Acknowledged priority that is deliberately parked. Not forgotten — just not now.

Momentum Badges

Badge	Meaning
RISING	Active progress. Things are moving. Good signal.
STEADY	Progressing at a normal pace. No concern.
STALLING	Movement has slowed. Watch this. May need a push or a decision.
BLOCKED	Cannot move forward. Something specific is in the way. Needs your attention or delegation.

What Hannah Updates Here

- When you give her a new priority, she adds it with rank, urgency, and momentum
- When a priority resolves or changes urgency, she updates it
- When something stalls (no movement in 3–7 days), she flags it via Telegram
- The next_action field is updated after every meaningful interaction

03 Panel 2 — Deal Pipeline

Every active deal, sorted by how long since it last moved. The most stale deal is always at the top. The number on the right is days since Hannah last touched that record.

Days Since Update — Color Codes

Days	Color	Meaning
0–6 days	Green	Active. Recent movement. No concern.
7–13 days	Yellow	Stalling. A follow-up should be queued.
14+ days	Red	Dead air risk. Needs immediate attention or a conscious decision to park it.

Deal Statuses

Status	Meaning
active	Deal is live and in motion
waiting	Deliberately paused — waiting on a third party or external timing. Not stalled — intentionally parked.
closing	In final stages. Term sheet sent or negotiations underway.
closed	Deal completed or resolved
dormant	No current activity. Not dead — but not active.

04 Panel 3 — Relationship Radar

Key contacts sorted by days since last meaningful interaction. Relationship capital decays silently. You do not notice the drift until it is a problem. The radar makes it visible before it becomes one.

Days Since Contact — Color Codes

Days	Color	Meaning
0–9 days	Green	Recent contact. Relationship is active and healthy.
10–20 days	Yellow	Starting to drift. Consider a touchpoint if strategically important.
21+ days	Red	Drift risk. For high-value relationships, this warrants action this week.

Relationship Statuses

Status	Meaning
strong	Relationship is healthy, active, and mutually engaged
warm	Positive relationship with some recent contact. Needs maintenance.
active	Currently engaged on a specific matter
cold	Relationship has gone quiet. Needs a restart or conscious decision to deprioritize.
dormant	No recent contact. Not a priority at this time.

05 Panel 4 — Signal Feed

Every signal Hannah has evaluated, logged with IUM score and action taken. Hannah's audit trail — every meaningful event she processes is logged here with a score, classification, and what she did about it.

The IUM Score (1–10)

IUM stands for Importance x Urgency x Momentum — Hannah's internal scoring system for evaluating how much a signal deserves your attention.

Score	Level	Meaning
1–3	Low	Logged for completeness. No action required. Noise or informational.
4–6	Medium	Worth knowing. May require action within the week.
7–8	High	Requires attention. Hannah has likely already taken action or queued a follow-up.
9–10	Critical	Requires immediate attention. Hannah surfaces this via Telegram immediately.

Signal Types

Type	Meaning
OPPORTUNITY	A potential positive development — new deal, investor interest, strategic opening
RISK	A potential negative — deal going cold, relationship fraying, deadline approaching
MOMENTUM	A movement signal — something stalled is now moving, or vice versa
PATTERN	A recurring observation across multiple signals
NOISE	Logged but low value. Present for completeness.

Signal Sources

Source	Meaning
email	Signal originated from your inbox
telegram	Signal originated from a message you sent Hannah via Telegram
cron	Signal originated from an automated scheduled job
manual	Signal logged manually by you or Hannah from a conversation

06 Footer Strip — Open Decisions

Strategic decisions that are pending resolution, with revisit dates. A horizontal strip at the bottom of the dashboard — intentionally quiet, not a panel. A persistent reminder of what is open.

Decision Statuses

Status	Meaning
active	Decision is open — either not yet made, or made but outcome not yet known
resolved	Decision was made and outcome is documented
reversed	A previous decision was reversed. Logged for institutional memory.

Revisit Date

When Hannah logs a decision, she optionally records a revisit date — the date by which you should know whether the decision was right. When the revisit date passes, it appears in the footer as a quiet flag.

What Hannah Logs Here

- When you say 'I've decided to...' she logs it
- When you make a major strategic choice in conversation, she captures context and rationale
- When a decision resolves, she updates the status

07 Technical Reference

Item	Value
Database	~/.openclaw/hannah.db — SQLite on your Mac Mini
Tables	entities, signals, decisions, priorities, memory
Dashboard URL	http://[tailscale-ip]:8001/dashboard/dashboard.html
Your current URL	http://100.89.207.104:8001/dashboard/dashboard.html
Auto-refresh	Every 60 seconds

Manual Updates from Terminal

```
# Log a signal manually
~/.openclaw/tools/intelligence.sh create event \
  --props 'source=manual' 'signal_type=opportunity' \
         'ium_score=8' 'summary=Your summary here'

# Or simply tell Hannah in Telegram:
# 'Log a signal: [what happened]'
# She will use intelligence.sh to write the record.
```

08 Quick Reference Card

Panel	Data Source	Key Metric	Red Flag
Priority Stack	priorities table	Urgency + Momentum badges	NOW + STALLING or BLOCKED together
Deal Pipeline	entities (type=deal)	Days since last update	14+ days stale on any active deal
Relationship Radar	entities (type=person)	Days since contact	21+ days on a high-value contact
Signal Feed	signals table	IUM Score (1–10)	IUM 9–10 with no action_taken logged
Open Decisions	decisions table	Revisit date	Revisit date passed with no resolution

> The dashboard is a mirror, not a manager. It reflects what Hannah knows. The richer the data Hannah has — the more signals she logs, the more deals she tracks, the more relationships she monitors — the more useful this screen becomes. Every interaction you have with Hannah that results in a database write makes this dashboard more accurate and more valuable.
