VELA Installation Guide

Step-by-step installation instructions.
Read every step before you start. Do not skip ahead.

Your judgment. Our infrastructure.

Version 2.0 · March 2026

Before you begin: your VELA installer (Greg) will be on a call with you for this entire process. Do not start the installation without him on the line. If anything looks different from what this guide describes, stop and tell him.

01 Before You Open Terminal

Complete all of this before touching anything else.

You need four things ready before you run the installer. Have them open in front of you — either printed from the README First guide or in your password manager.

What You Need	Where It Is	What It Looks Like
VELA License Key	Sent by your installer	VELA-XXXX-XXXX-XXXX-XXXX
Anthropic API Key	console.anthropic.com → API Keys	sk-ant-api03-...
Telegram Bot Token	From @BotFather in Telegram	1234567890:AAEabc...
Telegram Group ID	From @userinfobot in your group	-1003750313044
Telegram User ID	From @userinfobot in a DM	8248659673
Google Drive Folder ID	From the URL of your VELA Backups folder	1ABC123xyz...

Check Energy Saver First

VELA requires your Mac Mini to never sleep. Do this now, before anything else.

1	**Click the Apple menu** Top-left corner of your screen.

CLICK	Apple menu (top-left) → System Settings

2	**Go to Energy settings**

CLICK	Energy (look for a battery icon in the left sidebar)

3	**Disable sleep**

SET	"Prevent automatic sleep when the display is off" → ON (toggle to green)

If you cannot find Energy in System Settings, search for it using the search bar at the top of System Settings.

Confirm Ethernet Is Connected

VELA requires a wired Ethernet connection — not WiFi. Look at the back of your Mac Mini and confirm an Ethernet cable is plugged in and the other end is connected to your router or switch.

> If you only have WiFi available right now, tell your installer before proceeding. WiFi can work for installation but is not recommended for day-to-day operation.

02 Opening Terminal

Terminal is the application you use to run the installer.

1	**Open Spotlight Search** The fastest way to find Terminal.

PRESS	Command (⌘) + Spacebar

2	**Search for Terminal**

TYPE	Terminal

PRESS	Enter

A window opens with a black or dark background and a blinking cursor. This is Terminal. It should show something like:

```
yourname@Mac-mini ~ %
```

> If Terminal looks different from this — for example, if it shows a different prompt or has a lot of text already — tell your installer before continuing.

03 Running the Installer

One command. Copy it exactly as shown.

1	**Click once inside the Terminal window** This makes sure the window is active and ready to receive input.

2	**Copy the install command** Your installer will also send this to you.

COPY THIS EXACTLY	curl -fsSL https://raw.githubusercontent.com/greg442/Vela_Scripts_2/main/install.sh | bash

3	**Paste it into Terminal**

PRESS	Command (⌘) + V to paste

You should see the command appear after the % symbol. It should look like this:

```
yourname@Mac-mini ~ % curl -fsSL https://raw.githubusercontent.com/greg442/Vela_Scripts_2/
main/install.sh | bash
```

4	**Run it**

PRESS	Enter

The installer will clear the screen and show a VELA banner. This is normal. If you see an error immediately after pressing Enter — especially something about "command not found" — stop and tell your installer.

04 Section 1 of 5 — System Check

Automatic. You watch, you don't type anything yet.

The installer checks your Mac Mini automatically. You will see a series of green checkmarks. This takes about 10 seconds.

✓ GOOD	✗ PROBLEM
✓ macOS 15.x — Apple Silicon	✗ 16 GB RAM minimum required
✓ 32 GB unified memory	or ✗ No internet connection
✓ Internet confirmed	

If you see a warning about sleep being enabled, the installer will pause and ask you to fix it. Go to System Settings → Energy and set sleep to Never, then come back and press Enter.

05 Section 2 of 5 — License Validation

You type your VELA license key here.

The installer asks for your VELA license key. This was sent to you by your installer before the call.

TYPE	Your VELA License Key (VELA-XXXX-XXXX-XXXX-XXXX)

PRESS	Enter

You will see:

```
✓ License valid — Tier: command
```

If you see "Invalid license key" — check that you typed it exactly. No extra spaces. Capital letters. Contact your installer if the problem continues.

06 Section 3 of 5 — Your Information

The installer personalizes Hannah for you. Answer each question and press Enter.

Work through each prompt one at a time. Press Enter after each answer. If you make a mistake, your installer can correct it after installation is complete — do not stop the installation.

Prompt	What to Type	Example
Your full name	Your first and last name	John Smith
Your company / organization	Your company name	Acme Capital
Your role / title	Your job title	Managing Director

Prompt	What to Type	Example
What would you like your agent called?	Hannah (or press Enter for default)	Hannah
Your primary Gmail address	Your main Gmail	john@gmail.com
Your CoS Gmail address	Your Chief of Staff email	cos.john@gmail.com
Your Mac Mini username	Your Mac login name — no spaces	johnsmith
Your timezone	Your timezone in this exact format	America/New_York
Morning brief time (24h format)	Hour for morning brief — 6 = 6am	6
Evening brief time (24h format)	Hour for evening brief — 16 = 4pm	16
Telegram Bot Token	Paste your bot token from @BotFather	1234567890:AAEabc...
Telegram User ID	Your numeric user ID from @userinfobot	8248659673
Telegram Group ID	Your group ID — starts with minus sign	-1003750313044
Anthropic API key	Paste your API key from console.anthropic.com	sk-ant-api03-...
Google Drive backup folder ID	The folder ID from your VELA Backups folder URL	1LtIKxp0sHq60IO...

After all prompts, the installer shows a summary and asks: Continue? (y/n). Review your details. Type y and press Enter to proceed.

07 Section 4 of 5 — Downloading VELA

Automatic. Do not close Terminal.

The installer downloads all VELA scripts from GitHub. You will see a list of files downloading with green checkmarks. This takes 1–2 minutes.

✓ GOOD	✗ PROBLEM
✓ vela_install.sh	⚠ Could not download: filename
✓ license_check.py	(more than 2 warnings = problem)
✓ email_triage.py	
✓ Downloaded 12 scripts	

If you see more than 2 download warnings, tell your installer. A few warnings are normal — all warnings means a network problem.

08 Section 5 of 5 — Installing VELA

The main install. This takes 20–60 minutes. Most of it is automatic.

The installer now runs 18 steps automatically. Most steps take a few seconds. Step 3 (downloading AI models) takes 15–30 minutes — this is normal. Do not close Terminal.

Step	What You See	Time	Action Required
Step 1 — Homebrew	Checking or installing Homebrew	1–5 min	None — watch for green checkmark
Step 2 — Core Dependencies	Installing git, node, python	1–3 min	None
Step 3 — Ollama + Local Models	Pulling qwen2.5:7b, llama3.1:8b — shows download progress	15–30 min	None — this is the long step
Step 4 — OpenClaw	Installing OpenClaw	1–3 min	None
Step 5 — Directory Structure	Creating folders	seconds	None
Step 6 — API Keys	Saving your credentials	seconds	None
Step 7 — Telegram	Configuring Telegram	seconds	None
Step 8 — WhatsApp	Configuring WhatsApp	seconds	None
Step 9 — Google Workspace	Authenticating Gmail	1–2 min	Browser opens — sign into Gmail
Step 10 — Create Agents	Creating 6 AI agents	seconds	None
Step 11 — Assign Workspaces	Setting workspace paths	seconds	None

Step	What You See	Time	Action Required
Step 12 — Populate Workspace Files	Downloading your personalized files	seconds	None
Step 13 — Install Scripts	Installing automation scripts	seconds	None
Step 14 — Cost Optimization	Applying cost settings	seconds	None
Step 15 — Cron Jobs	Setting up scheduled tasks	seconds	None
Step 16 — Config Backup	Saving stable config backup	seconds	None
Step 17 — License Validation	Activating license check	seconds	None
Step 18 — Start and Verify	Starting the system and running verification	1–2 min	Watch for all green checkmarks

09 Step 9 — Google Authentication

A browser window opens. Here is exactly what to do.

During Step 9, a browser window opens automatically asking you to sign into Google. This is normal and expected.

1	**A browser window opens** It shows a Google sign-in page.

CLICK	The Gmail account you entered during setup (your primary Gmail)

2	**Grant permissions** Google asks VELA to access your Gmail and Calendar.

CLICK	Allow (or Continue)

3	**Return to Terminal** The browser may show a success message. Go back to Terminal.

CLICK	Back in the Terminal window

The installer then asks about your CoS email:

```
Authenticate CoS email (cos.john@gmail.com)? [y/n]:
```

TYPE	y

PRESS	Enter

A second browser window opens. Sign into your CoS Gmail account and click Allow again.

> If the browser does not open automatically, the installer will show a URL. Copy it, paste it into your browser, and sign in.

10 Step 18 — Verification

Watch for these exact outputs. All green = success.

After all 18 steps, the installer runs a final check and shows you the results. Look for these:

✓ GOOD	✗ PROBLEM

Gateway: online	Gateway: check status manually
All agents show full workspace paths	or any agent shows (none)
No (none) entries	

At the very end, the installer shows:

```
VELA is installed.

[Your Name] — your Hannah is ready.

Three things to do now:

1. Open Telegram and message your bot to pair it

2. Scan WhatsApp QR: Settings → Linked Devices → Link a Device

3. Type /new and say hello to Hannah
```

> If you see this screen, installation is complete. Do not close Terminal yet — your installer will guide you through the three final steps.

11 Post-Install — Pairing Telegram

Do this immediately after installation completes.

1	**Open Telegram on your phone**

OPEN	Telegram app on your iPhone

2	**Find your bot** Search for the bot username you created with @BotFather.

TAP	Search icon → type your bot's username (e.g. @VELAcos_bot)

3	**Start the conversation**

TAP	START (or send any message — type Hello and send)

4	**Wait for response** Hannah should reply within 10 seconds.

If Hannah asks for a pairing code, your installer will provide it. If she responds normally — installation is fully complete.

> Hannah responding to your first Telegram message is the final confirmation that VELA is live and working.

12 Post-Install — Pairing WhatsApp

1	**Open WhatsApp on your iPhone**

OPEN	WhatsApp app

2	**Go to Linked Devices**

TAP	Settings (bottom right) → Linked Devices

3	**Link a Device**

TAP	Link a Device

4	**Scan the QR code** Your installer will show you where to find the QR code on your Mac Mini screen.

SCAN	Point your phone camera at the QR code on your Mac Mini screen

WhatsApp shows "Linked" or a success message. Your installer confirms on his side.

13 If Something Goes Wrong

Common problems and what to do.

What You See	What to Do
✗ 16 GB RAM minimum required	Your Mac Mini does not meet the minimum requirement. Stop and contact your installer.
✗ No internet connection	Check that your Ethernet cable is connected. Check your router. Try again.
Invalid license key	Check spelling and format. No extra spaces. Contact your installer if it still fails.
✗ command not found (any step)	Do not try to fix this yourself. Tell your installer exactly what you see.
Download step shows many ⚠ warnings	Tell your installer. May be a network or GitHub access issue.
Browser doesn't open for Google	The installer shows a URL in Terminal. Copy it and paste it into Chrome or Safari.
Hannah does not respond in Telegram	Wait 30 seconds and try again. Then tell your installer.
Install stops unexpectedly	Do not close Terminal. Take a screenshot and contact your installer.
